EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Jerry Mahurin on November 20, 2007.

The application has been amended as follows:

Claim 17 (Currently Amended) A motion detection method in a tire monitor configured for mounting on a vehicle in a remote tire monitoring system including a receiver, the method comprising:

detecting an output signal of a shock sensor by alternately detecting an output signal of a first shock sensor and detecting an output signal of a second shock sensor;
based on the output signal, making a current motion conclusion;
testing a last saved motion conclusion; and
if the current motion conclusion matches the last saved motion conclusion,
transmitting data from the tire monitor for reception by the receiver.

Allowable Subject Matter

2. Claims 11-17 are allowed.

In the field of vehicle tire monitoring system, there is no reference in prior art fairly teach or suggest a motion detection method in a tire monitor comprising the step:

if the motion decision counter exceeds a threshold, transmitting the data from the tire monitor and entering a low power sleep mode before again detecting the output signal of the shock sensor in the manner claimed as found in claim 11.

In the field of vehicle tire monitoring system, there is no reference in prior art fairly teach or suggest a motion detection method in a tire monitor comprising the step:

if the current motion conclusion does not match the last saved motion conclusion, entering a low power sleep mode before again detecting the output signal of the shock sensor in the manner claimed as found in claim 12.

In the field of vehicle tire monitoring system, there is no reference in prior art fairly teach or suggest a motion detection method in a tire monitor comprising the combination of steps in the manner claimed as found in claims 14 and 15.

In the field of vehicle tire monitoring system, there is no reference in prior art fairly teach or suggest a motion detection method in a tire monitor comprising the steps of:

detecting an output signal of a shock sensor by alternately detecting an output signal of a first shock sensor and detecting an output signal of a second shock sensor;

if the current motion conclusion matches the last saved motion conclusion, transmitting data from the tire monitor for reception by the receiver in the manner claimed as found in claim 17.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
